SMOOTH SIDE ALUMINUM END DUMP - PRODUCT GUIDE

## SMOOTH SIDE ALUMINUM END DUMP

Introducing the Armor Lite Aluminum SS End Dump trailer. Engineered tough to not only be lighter than other light weight trailers, but also stronger, able to withstand “Torsional Twist” that will typically cause cracking of longer light weight trailers. Professionally crafted, it is the only trailer of its kind on the market that is robotically welded. The use of robotics allows for greater weld penetration while controlling heat, thus reducing warpage. Appearance is greatly enhanced which increases the overall long term value. Its aerodynamic design maximizes fuel economy while the lower floor height gives the SS End Dump maximum anti-roll stability and ease of loading. The external rear post eliminates the “funneling effect” found in other smooth side trailers, reducing wear and providing a cleaner, faster dump. You cannot find a higher quality built aluminum trailer on the market today.
